## EVENT DRIVEN BUFFER

96

## EVENT DRIVEN BUFFER

96  
 Actual value is:  $((1 - \exp(\lambda \Delta t)) / \lambda \Delta t) \cdot \text{error}$   
 Current value for  $\lambda \Delta t$  is .10  
 Event driven reset integration may also be employed  
 Euler integration is sufficient for the discrete form.  
 (example shown below is for update rate = .01 sec)

# EVENT DRIVEN BUFFER

96

Actual value is:  $((1 - \exp(\lambda \cdot \text{ach})) / \lambda) \cdot \text{error}$   
 Current value for  $\lambda \cdot \text{ach}$  is -10  
 Event driven reset integration may also be employed  
 Euler integration is sufficient for the discrete form.  
 (example shown below is for update rate = .01 sec)
